

Executive Brief — Business Banking, Paperless

A working prototype that retires paper forms across seventeen banking journeys — live today, at zero build cost.

0 days

to Phase 2 readiness

The problem

Every business banking service event — mandate changes, closures, bulk payments, KYC refresh — still runs on paper forms and phone calls. Each form takes 3–7 days, can be lost or mis-signed, and erodes the relationship. Tide, Starling and Monzo Business offer instant digital equivalents today.

What exists — today, not a proposal

A fully working front-end prototype: **17 step-based workflows** (account closure to balance certificates), **7 business entity types** with correct mandate and compliance divergence, **8 regulatory frameworks** implemented end-to-end (Consumer Duty, MLR 2017, PSD2 SCA, GDPR, DISP, SYSC 9, CCA 1974, HMRC MTD), and WCAG 2.1 AA accessibility verified by automated audit on every build. It runs in any browser with no install:

imscots-ui.github.io/santander

Why now

The underlying capabilities — GOV.UK One Login, Confirmation of Payee, Open Banking consent, HMRC MTD APIs — are established utilities, not research. The prototype proves the customer experience; Phase 2 wires it to production services. Every quarter of delay is a quarter of branch visits, postal delays and competitor switching that need not happen.

Three decisions sought on Friday

- | | | |
|-----------|--|--|
| 01 | Walk through the prototype | Thirty minutes with the live build — the workflows, the compliance paths, the dual-signature unlock. A view based on evidence, not a slide. |
| 02 | Commission a technical review | Share the Architecture deck with engineering leads. The wrap-around pattern, API contracts and 4-phase build plan are documented and ready to challenge. |
| 03 | Decide Phase 2 scope and timing | Phase 1 is complete. Phase 2 needs a sponsor, a team, and a timeline — that decision is the only thing between here and production. |
